Module Name:	Login Page - Requirement Reviews, Code Walkthroughs, Inspections & Peer Reviews
Test Case ID:	FB_01
Tester Name:	Niharika
Test Case Descripti	To validate requirement reviews, code walkthroughs, software inspections, and peer review activities for Facebook's login, sign-up, and account recovery modules.
Prerequisites:	1. Software Requirement Specification (SRS) for Facebook Module 2. Source Code Repository / PRs 3. Checklist for Code Review and Inspection 4. Review Team Credentials
Environment Infor	https://www.facebook.com

Scenario ID	Scenario	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
1a	Requirement Review - Registration SRS	1. Open Facebook Sign-Up SRS Document 2. Verify mandatory field definitions 3. Check unique email/mobile logic 4. Verify password criteria	Facebook Sign-Up SRS Document v1.0	All sign-up functional requirements and validation criteria should be unambiguous and complete.	SRS requirement review completed; validation logic verified.	Pass	Covers requirement review for registration
1b	Requirement Review - Login & Security Rules	1. Open Facebook Auth SRS Document 2. Check account locking rules 3. Verify error message standards 4. Check session timeout specifications	Facebook Auth SRS Document v1.0	Error message and security requirements should be fully specified.	Login business rules and security requirements confirmed.	Pass	Covers requirement review for login
1c	Code Walkthrough - Registration Controller Logic	1. Developer presents registration module 2. Trace input sanitization logic 3. Verify SQL injection & XSS prevention 4. Review DB payload format	Registration Controller Code (`SignUpService.java`)	Code logic must handle user inputs securely and sanitize parameters before processing.	Proper regex validation and sanitization confirmed in walkthrough.	Pass	Walkthrough completed with dev team
1d	Code Walkthrough - Password Encryption & Hashing	1. Trace password execution flow 2. Verify salted bcrypt implementation 3. Ensure plain passwords are never logged	Security Auth Module (`PasswordEncoder.java`)	Passwords must be hashed securely using salted algorithms.	Salted bcrypt hashing verified; plain passwords never stored.	Pass	Security standard walkthrough passed
1e	Formal Inspection - Login API Endpoints	1. Inspect login endpoint implementation 2. Check error handling and exception logging 3. Verify compliance with secure coding standards	Login Controller (`LoginController.java`)	Code must adhere to coding guidelines without unhandled exceptions.	Minor logging exception defect found and resolved during inspection.	Pass	Defect logged and fixed
1f	Formal Inspection - UI Layout & CSS Breakpoints	1. Inspect CSS grid and breakpoint rules 2. Verify accessibility (ARIA tags) 3. Check viewport scaling properties	Facebook Stylesheets & UI Components	UI components should adapt seamlessly across screen viewports.	Form layout scaled properly across desktop and mobile screens.	Pass	UI responsiveness inspection passed
1g	Peer Review - Client-Side Form Validation	1. Peer reviewer checks validation scripts 2. Verify email/mobile regex rules 3. Test real-time error triggering	Frontend Script (`signup_validation.js`)	Client validation should provide instant feedback without crashing.	Regex logic covers valid and edge-case mobile numbers correctly.	Pass	Peer approval granted
2a	Peer Review - Forgot Password & OTP Recovery Workflow	1. Review OTP generation algorithm 2. Inspect rate-limiting code 3. Check recovery link expiration timers	Account Recovery Module (`PasswordResetService.java`)	OTP should expire in 10 mins and limit retry attempts to 3.	Rate-limiting and expiration logic verified successfully.	Pass	Approved for staging deployment
